## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims 1-15,30-37 and 41-55 drawn to non-elected inventions. In 11/01/2006, applicant elected to prosecute Group III, claims 38-40 **without traverse**. The requirement is deemed proper and is therefore made **Final**.

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 38-40 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 38 recites the limitations "a suture or a band of material", it is unclear which recitation the applicant wishes to keep and which should have been deleted. Clarification is requested.

Claim 40 recites the limitation "the atrium" in line 2. There is insufficient antecedent basis for this limitation in the claim.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3734

Claims 38-40 are rejected under 35 U.S.C. 102(b) as being anticipated by Sterman et al (5,814,097). Sterman et al disclose in figures 8-9, a system for performing annuloplasty (see col. 27, lines 14-23), including: a plurality of staples (see col. 27, line 42), a suture 198 is able to staple to a mitral valve annulus along the suture to plicate mitral valve annulus which is able to reduce the length of the valve annulus (see col. 22, lines 58-67), where the staples are adapted to deliver into a left ventricle of a heart while the heart is beating (see col. 28, lines 19-20), and where the system further comprises an instrument 32 for delivering the staples to the valve annulus and placating the valve annulus (see col. 27, lines 17-23), where the system also comprises a port 22 adapted to span an atrium (see col. 22, lines 1-3) and a staple (see col. 27, lines 42-43) which passes through the port.

### *Conclusion*

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
